### Verification Testing

As part of OSI, Avid has elevated its storage qualification programs to a whole new level. It's important to note that our verification testing is not a guarantee of specific performance. It is, however, an indication that we have tested the listed third-party products on our storage and have found, at a minimum, that they have basic functionality and compatibility. Performance will vary depending upon various factors such as platform, operating system, product version, CPU speed, and amount of RAM.
